## Preface

### Comparison of mechanical anti-intruder products

The document "Product registration" describes the terms and procedures of how to register products at the Nordic insurance associations. The document also lists the product standards and which countries that recognise/acknowledge each standard.

This document shows the connection between old, expired and still valid standards. Products used in security installations must have a valid certificate at the time of the installation. This document shows the connection between different product standards and their classification and can only be used with the latest version of the "product registration" document.

For the purpose of the insurance companies' choice of intruder prevention for e.g. business enterprises, the Nordic insurance associations, Insurance Sweden, Finance Finland, Finance Norway and Insurance & Pension Denmark have devised security levels, skyddsklasser, sikringsniveauer etc. The number and extent of these levels of intruder prevention differ from association to association, but their common trait is that they utilize securing products registered by the individual country's insurance association. As for the individual security levels, skyddsklasser, sikringsniveauer etc. that are utilised, they are subject to quality and functionality requirements.

Since securing products of the same type may have been tested according to different standards and testing methods, it has been necessary to make a comparison of the securing and functional quality of the products that are classified according to the commonly used standards and testing methods.

On the basis of the recommended requirement specifications, the Nordic insurance associations have made comparison of the individual classes. The comparisons are listed in the following survey tables. These tables are called 'Comparison Keys' for anti-intruder products.

This document shows the connection between the levels of different types of security levels and different kind of product standards and classification.

The comparison keys can be used as a guideline, but it is not necessary representing identical levels.

In Norway, Finance Norway is represented by FG Skadeteknikk.

## Secure Storage Units

The term secure storage units is used as a common Nordic appellation for:

- Værdiskab/verdiskap/värdeskåp/kassakaappi
- Hvælving/hvelv/valv/holvi
- Hvælvdøre/hvelvdør/valvdörr/holvin ovi
- Kontantautomat/minibank/pankkiautomaatti
- Sikkerhetsskap/sikringsskab/säkerhetsskåb/turvakaappi
- Døgnbokse/nattsafe/servicebox/yösäilö
- Used to storage values – for example cash, keys for cars and number plates
